Supported Regions and Aurora DB engines for Blue/Green Deployments

[PDF \(/pdfs/AmazonRDS/latest/AuroraUserGuide/aurora-ug.pdf#Concepts.Aurora_Fea_Regions_DB-eng.Feature.BlueGreenDeployments\)](#)

[RSS \(auroraupdates.rss\)](#)

A blue/green deployment copies a production database environment in a separate, synchronized staging environment. By using Amazon RDS Blue/Green Deployments, you can make changes to the database in the staging environment without affecting the production environment. For example, you can upgrade the major or minor DB engine version, change database parameters, or make schema changes in the staging environment. When you are ready, you can promote the staging environment to be the new production database environment. For more information, see [Using Amazon RDS Blue/Green Deployments for database updates \(./blue-green-deployments.html\)](#) .

Blue/Green Deployments with Aurora MySQL

The Blue/Green Deployments feature is available for all versions of Aurora MySQL in all AWS Regions.

Blue/Green Deployments with Aurora PostgreSQL

The following Regions and engine versions are available for Blue/Green Deployments with Aurora PostgreSQL.

Reg ion	Auro ra Post greS QL 16	Auro ra Post greS QL 15	Auro ra Post greS QL 14	Auro ra Post greS QL 13	Auro ra Post greS QL 12	Auro ra Post greS QL 11
All AW S Regi ons	Versi on 16.1 and high er	Versi on 15.4 and high er	Versi on 14.9 and high er	Versi on 13.1 2 and high er	Versi on 12.1 6 and high er	Versi on 11.2 1 and high er
